

DiaCausal consultation summary

Printed 28/9/2026, 10:17:00 am · Request ID 097d2dc0db33

Patient as entered: age 52, male, diabetes 5 years, HbA1c 8.4%, eGFR 88 mL/min/1.73m², BMI 27 kg/m².

Engine 0.3.0 · params 49f7cd717c · rules 23fccccf59e · synthetic n=5000 seed=2026. Synthetic data only; no doses are shown.

Research prototype for clinician evaluation; not a marketed medical device; not for unsupervised clinical use.

BMI category: Obese (25 or above, Asian-Indian cut-off) · Request ID 097d2dc0db33 · computed on this device

The three options (safety rules ran first)

SGLT2 inhibitor

ESTIMATE

e.g. dapagliflozin

−0.93 (95% range **−0.98 to −0.87**)

percentage points of HbA1c at 6 months · propensity 0.43

Weight at 6 months

−2.1 kg (95% range **−2.3 to −2.0**)

Any low sugar by 6 months

2.5% (95% range 0.8 to 4.2)

Cost: price unavailable

DPP-4 inhibitor

ESTIMATE

e.g. sitagliptin

−0.70 (95% range **−0.76 to −0.64**)

percentage points of HbA1c at 6 months · propensity 0.25

Weight at 6 months

−0.4 kg (95% range **−0.6 to −0.2**)

Any low sugar by 6 months

1.8% (95% range 0.1 to 3.4)

Cost: price unavailable

Sulfonylurea

ESTIMATE

e.g. glimepiride

−0.94 (95% range **−1.00 to −0.88**)

percentage points of HbA1c at 6 months · propensity 0.32

Weight at 6 months

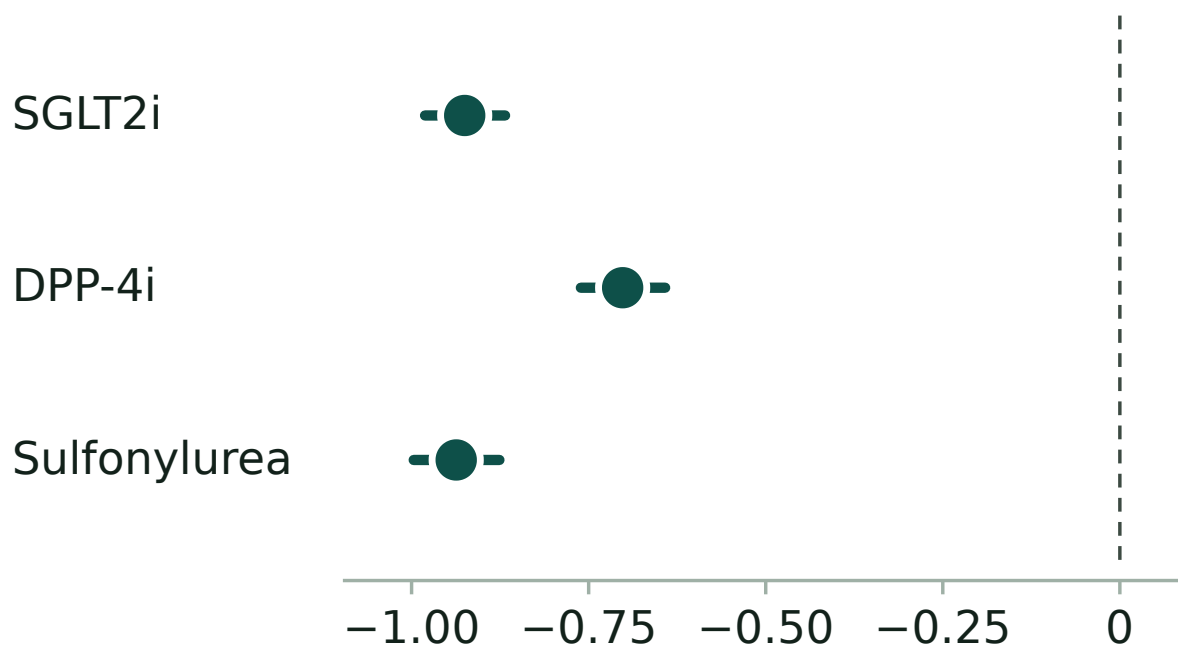

+1.0 kg (95% range **+0.8 to +1.2**)

Any low sugar by 6 months

9.9% (95% range 5.7 to 14.1)

Cost: price unavailable

Estimates with their 95% ranges

Change in HbA1c at 6 months, percentage points. Further left = larger fall. Dashed line = no change.

Fair comparisons

Comparison	Difference	95% range
SGLT2i minus DPP-4i	-0.22	-0.30 to -0.14
Sulfonylurea minus DPP-4i	-0.23	-0.32 to -0.15
SGLT2i minus Sulfonylurea	+0.01	-0.07 to +0.10

Negative = the first option lowers HbA1c more. A range that crosses 0 means no clear difference.

Decision support only. The clinician decides.

Weight and low-sugar figures come from the same synthetic cohort and method as HbA1c; they are secondary outcomes for discussion, not a ranking.
