

Here are the direct links to the foundational encyclopedias, handbooks, and clinical guidelines required to build the medical knowledge base for your Diabetes Clinical Decision Support System.

## Tier 1: Global Clinical Practice Guidelines (The "Ground Truth")

- **ADA Standards of Medical Care in Diabetes**
  - **Description:** The primary structural framework for your RAG pipeline, covering comprehensive diagnostic criteria, glycemic targets, and pharmacological approaches.
  - **Link:** [American Diabetes Association Standards of Care](#) (Access the latest annual supplement directly via Diabetes Care Journals).
- **IDF Global Clinical Practice Recommendations for Type 2 Diabetes**
  - **Description:** Provides adaptable, evidence-based care strategies distinguishing between optimal and basic-care settings.
  - **Link:** [IDF Clinical Practice Recommendations](#)
- **WHO Guidelines on Second- and Third-Line Medicines and Type of Insulin**
  - **Description:** The World Health Organization's definitive stance on medication escalation (e.g., when to introduce insulin vs. other hypoglycemic agents).
  - **Link:** [WHO Iris Institutional Repository](#)

## Tier 2: Foundational Medical Textbooks (The "Why")

- **Endotext (Endocrinology, Diabetes, and Bone Disease)**
  - **Description:** A massive, peer-reviewed, open-access clinical encyclopedia. It covers the deep pathophysiology of diabetes, etiology, and pharmacodynamics of treatments without the paywalls of traditional textbooks.
  - **Link:** [Endotext on NCBI Bookshelf](#)
- **Managing Diabetes Mellitus: Guide for Health Workers (WHO)**
  - **Description:** A practical, highly structured handbook covering the clinical staging of diabetes, acute/chronic complications, and dietary management.
  - **Link:** [WHO Managing Diabetes PDF](#)

## Tier 3 & 4: Real-World Context and Supplementary Data

- **MIMIC-IV-Note**
  - **Description:** Over 300,000 de-identified free-text discharge summaries and clinical notes. Essential for teaching your LLM real-world medical shorthand (like "DKA" for Diabetic Ketoacidosis).
  - **Link:** [MIMIC-IV-Note on PhysioNet](#) (Requires standard PhysioNet credentialing and CITI training).
- **Cochrane Database of Systematic Reviews**
  - **Description:** High-quality reviews on specific diabetes interventions (e.g., GLP-1 RAs, SGLT2 inhibitors) to capture nuanced overlapping conditions.
  - **Link:** [Cochrane Library](#) (Search for specific Type 2 Diabetes pharmacological reviews).
